

Quality

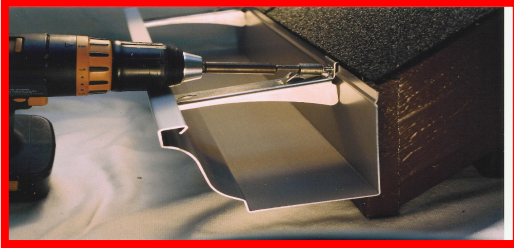

***We choose the
strongest support brackets.***

Sampson® Hanger Brackets

We won't compromise on Quality.

We prefer the:

Sampson® Hanger Bracket

- It supports the gutter like no other bracket available.
- The patented truss design is easy to understand.
- Completely hidden from view.

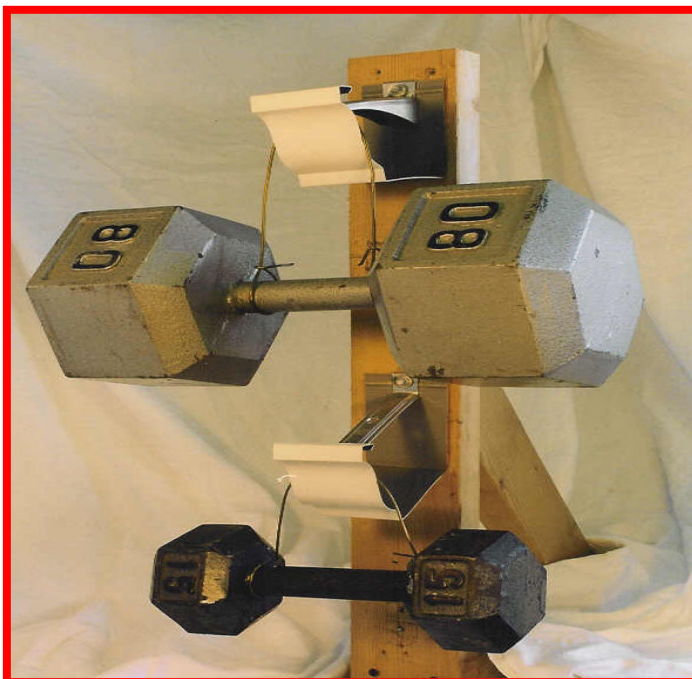

How strong should they be?

This two foot gutter full of water, weighs 15 lbs. That means the support bracket should hold up at least 15 lbs *without sagging down*. Maximum load (two foot gutter full of water and debris) can be as high as 40 lbs!

Stronger is better.

We have looked at all support brackets available, and the one that stands head and shoulders above the rest is the; **Sampson® Hanger Bracket**

Compare a Sampson® to the most commonly used bracket.

- Sampson 80 lbs no sagging
- Other 15 lbs and sagging

Choose wisely

Many contractors use standard brackets that do a poor job of supporting the gutter when it is full of water. Everyone has seen gutters sagging and falling down.

This homeowner was disappointed by the contractor's choice of support bracket.
